

Transact EC terminal (epay)

- For security reasons, not only the magnetic stripe but also the chip in the card has been read with cardware since around 2010.
- Only pinpads that can do this can be used with Cardware.
- Version 4.38 is required.
- The old version must be uninstalled. The new version must then be installed.
- The latest version is available on the Transact page, but can also be downloaded from PC CADDIE.
